

Salmonella/Poultry Workgroup Success Story and Lessons Learned

Craig Hedberg
University of Minnesota

Foodborne infections: *Salmonella* species

Healthy People 2000 objective 12.1

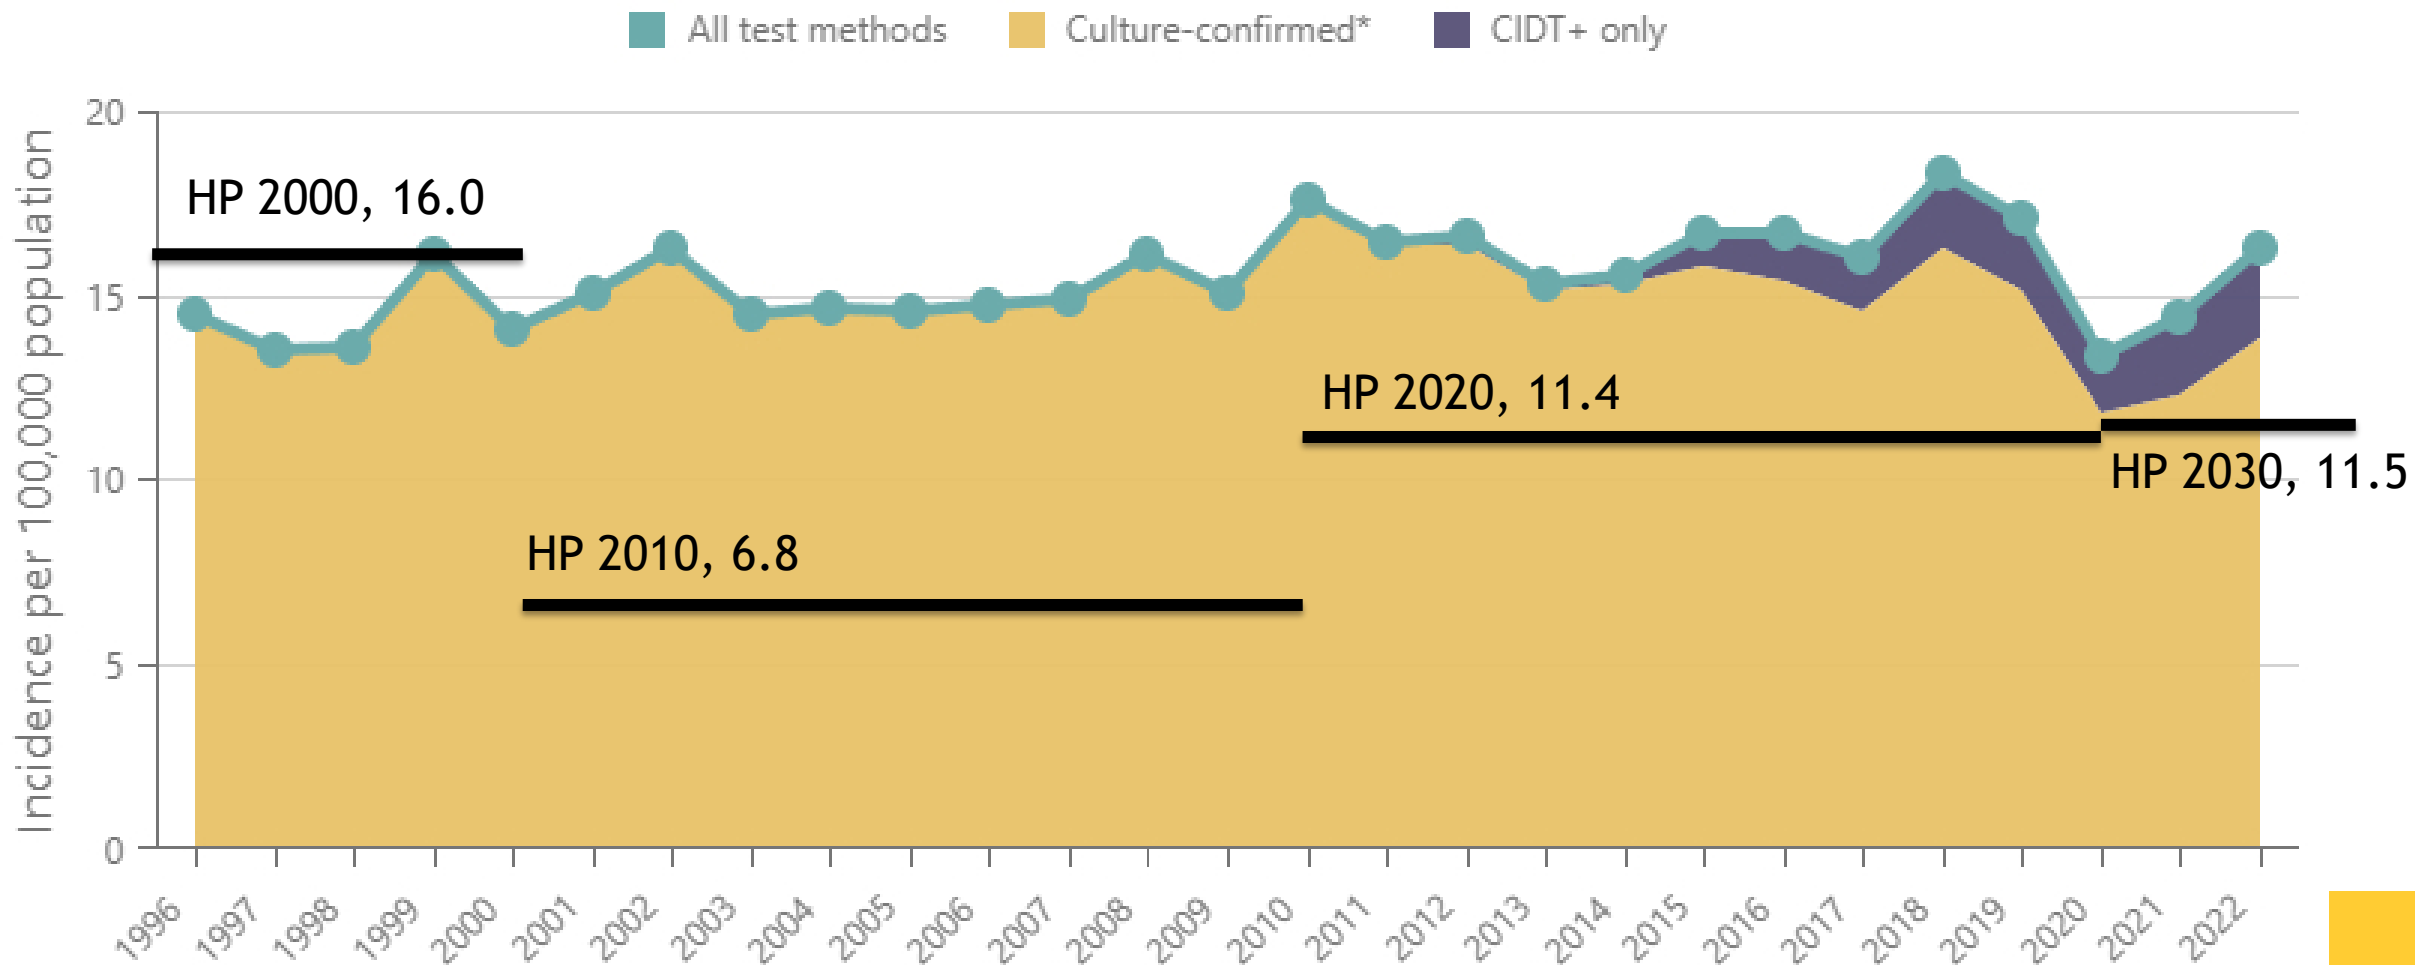

Salmonella infections by year; 1996-2022

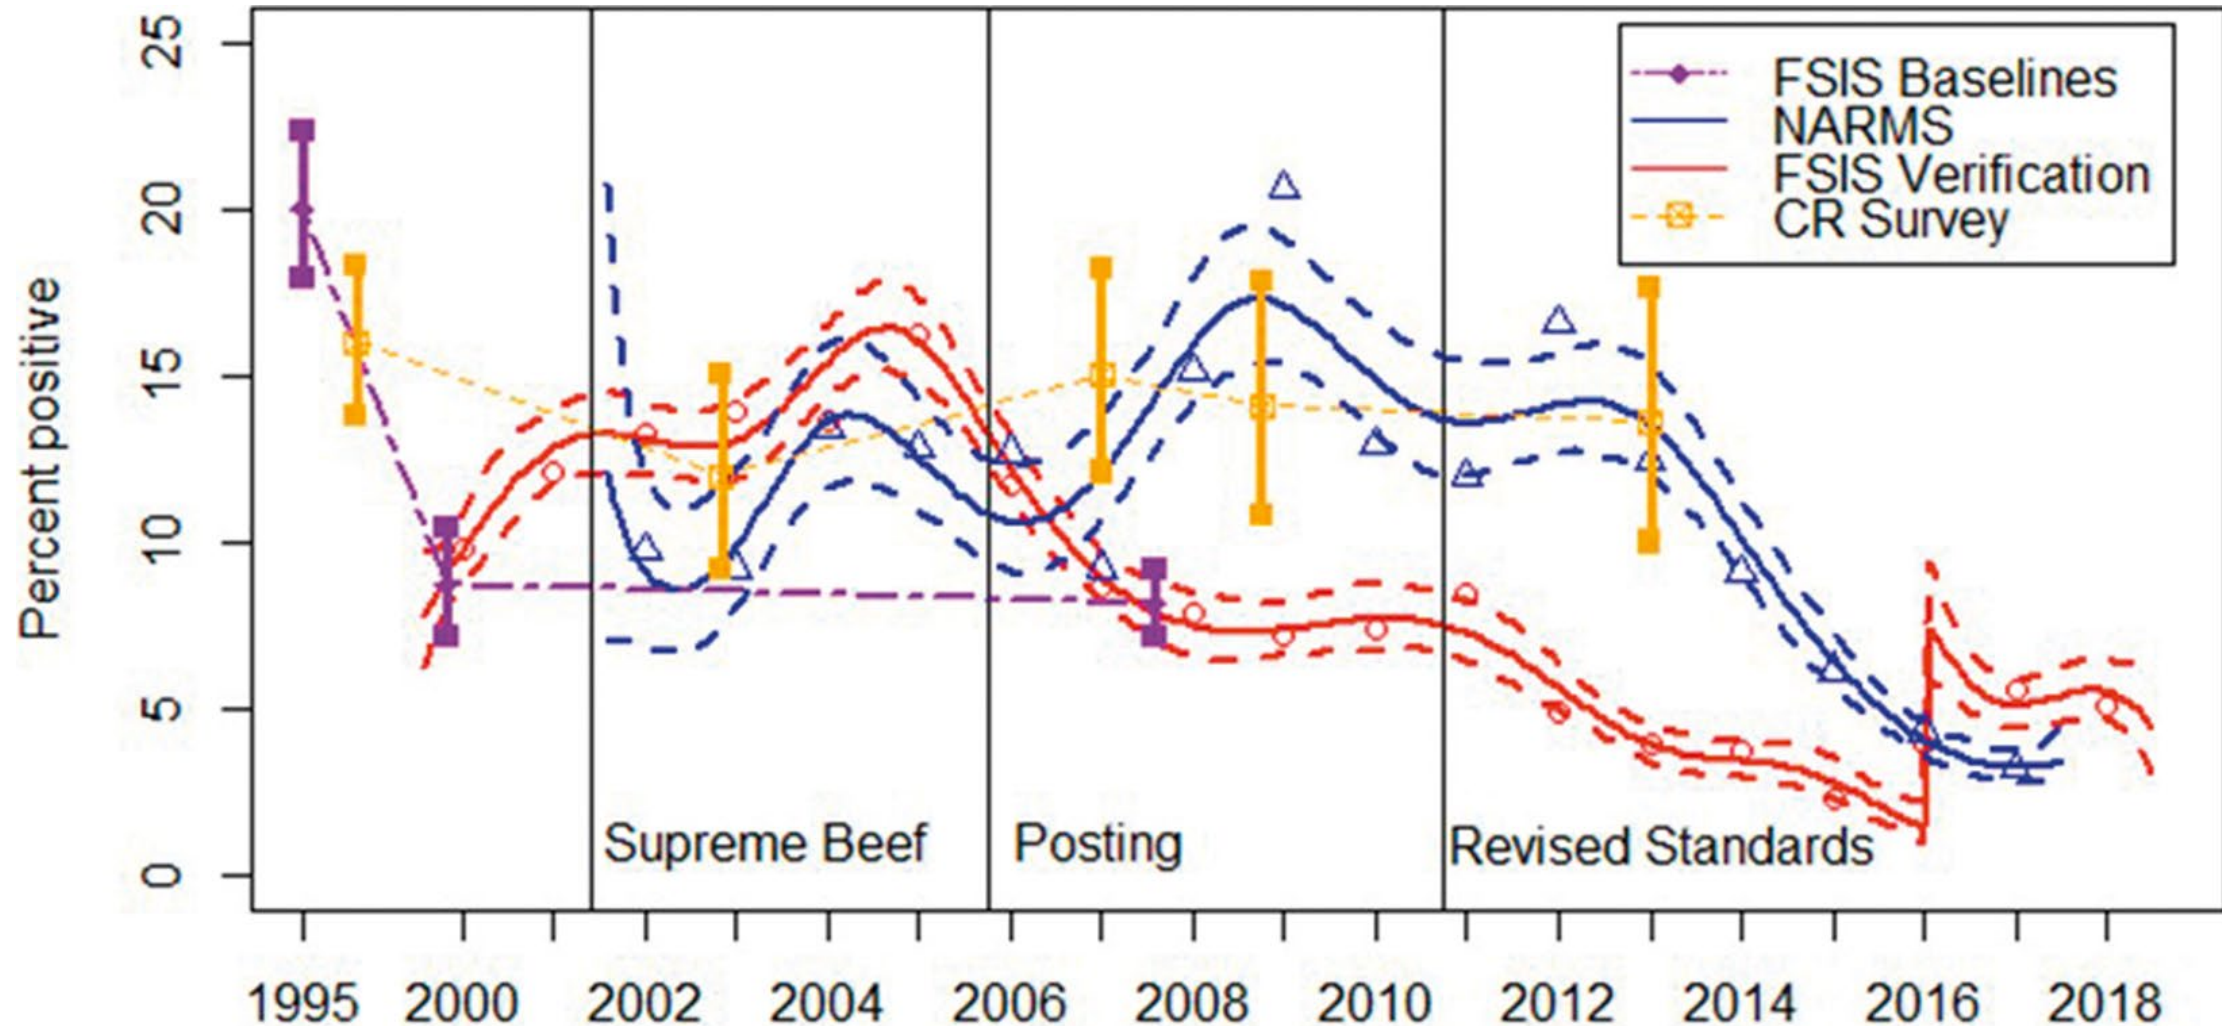

Incidence per 100,000 population – FoodNet sites; all test methods

* Culture-confirmed includes those infections confirmed by culture only or by culture following a positive CIDT.

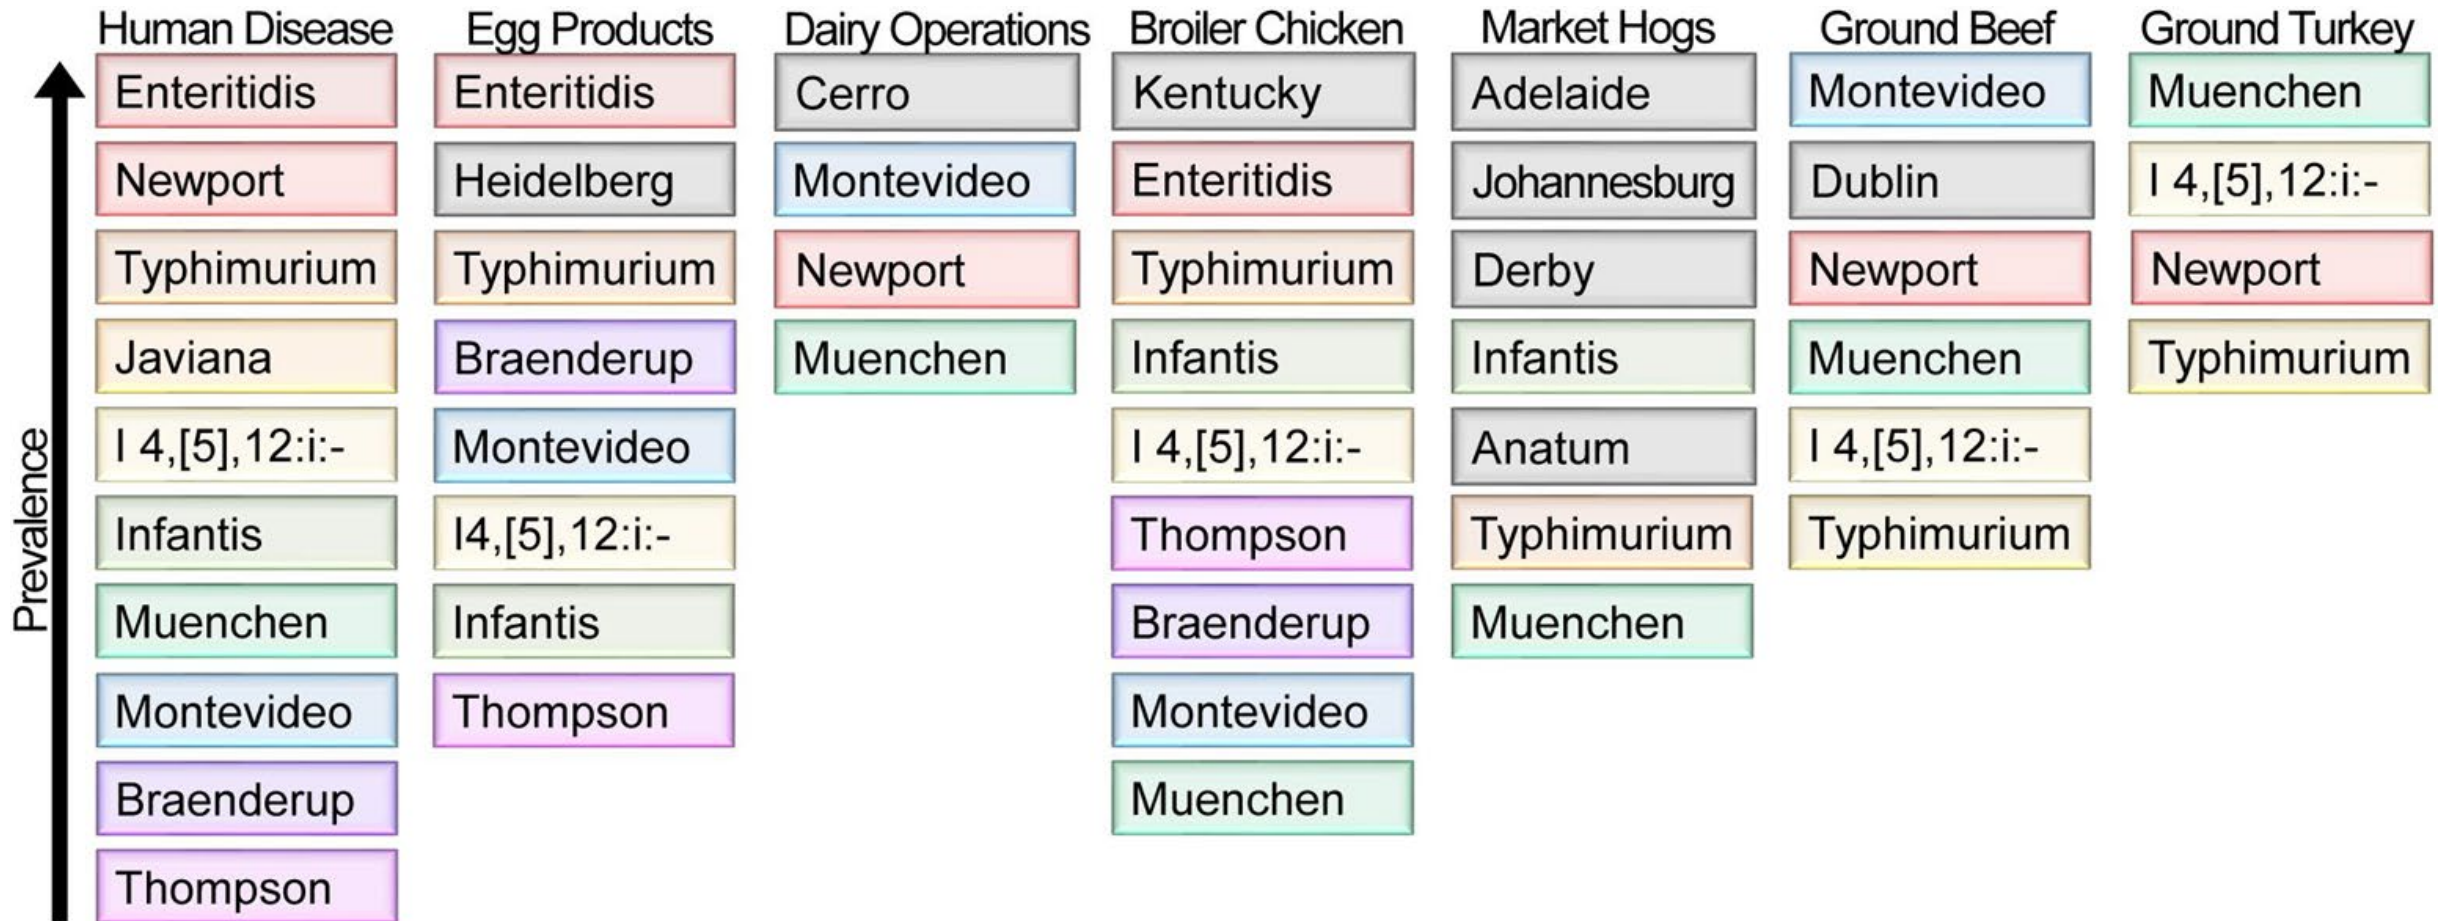

Source: FoodNet, Centers for Disease Control and Prevention

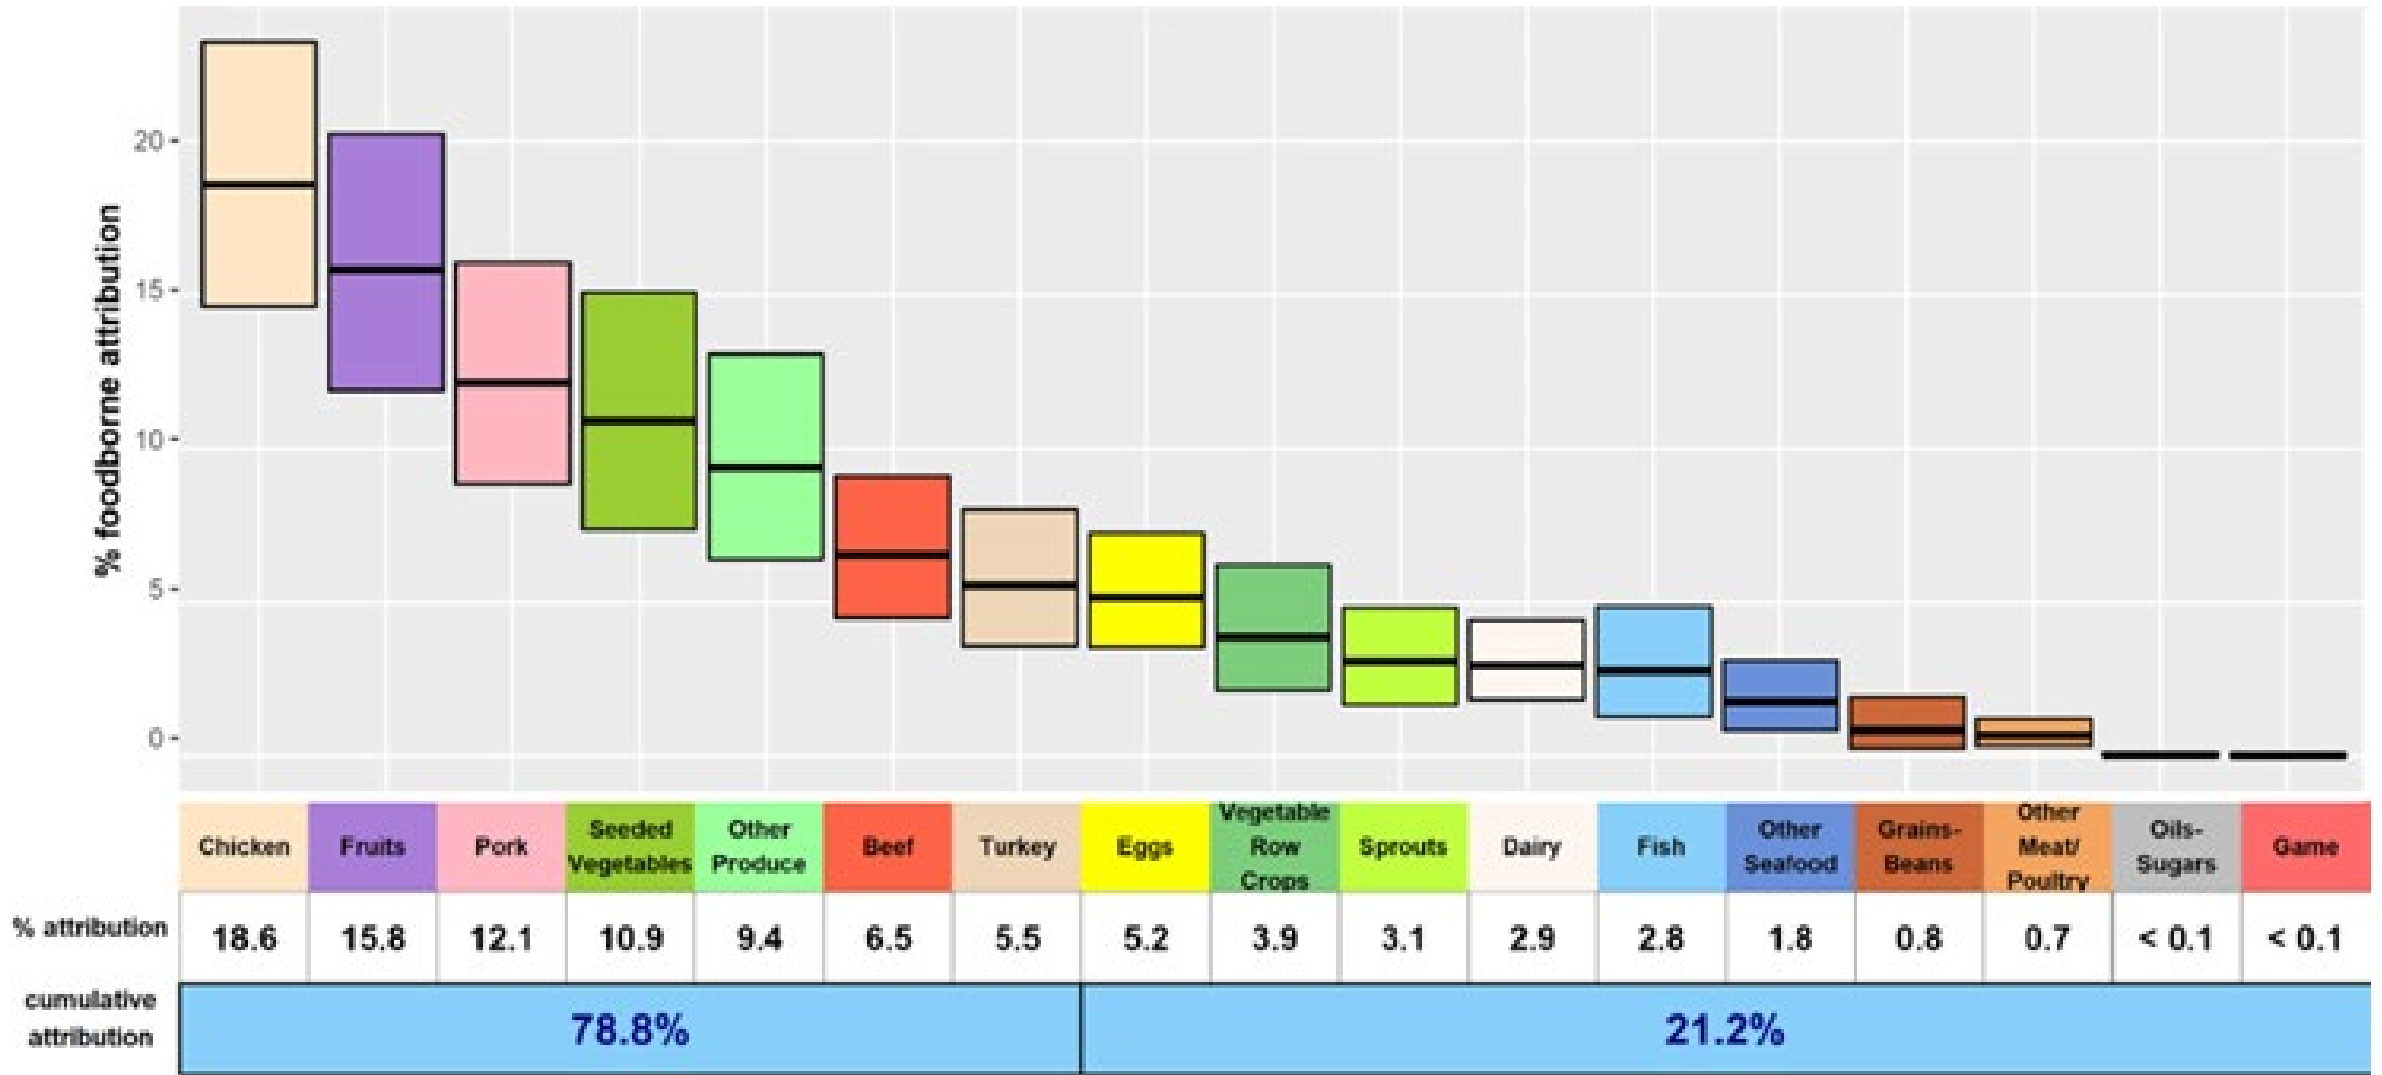

Trends in *Salmonella*-positive chicken carcass rinse samples from FSIS verification sampling results compared with retail chicken breast data collected by NARMS, FSIS baseline surveys, and privately funded surveys

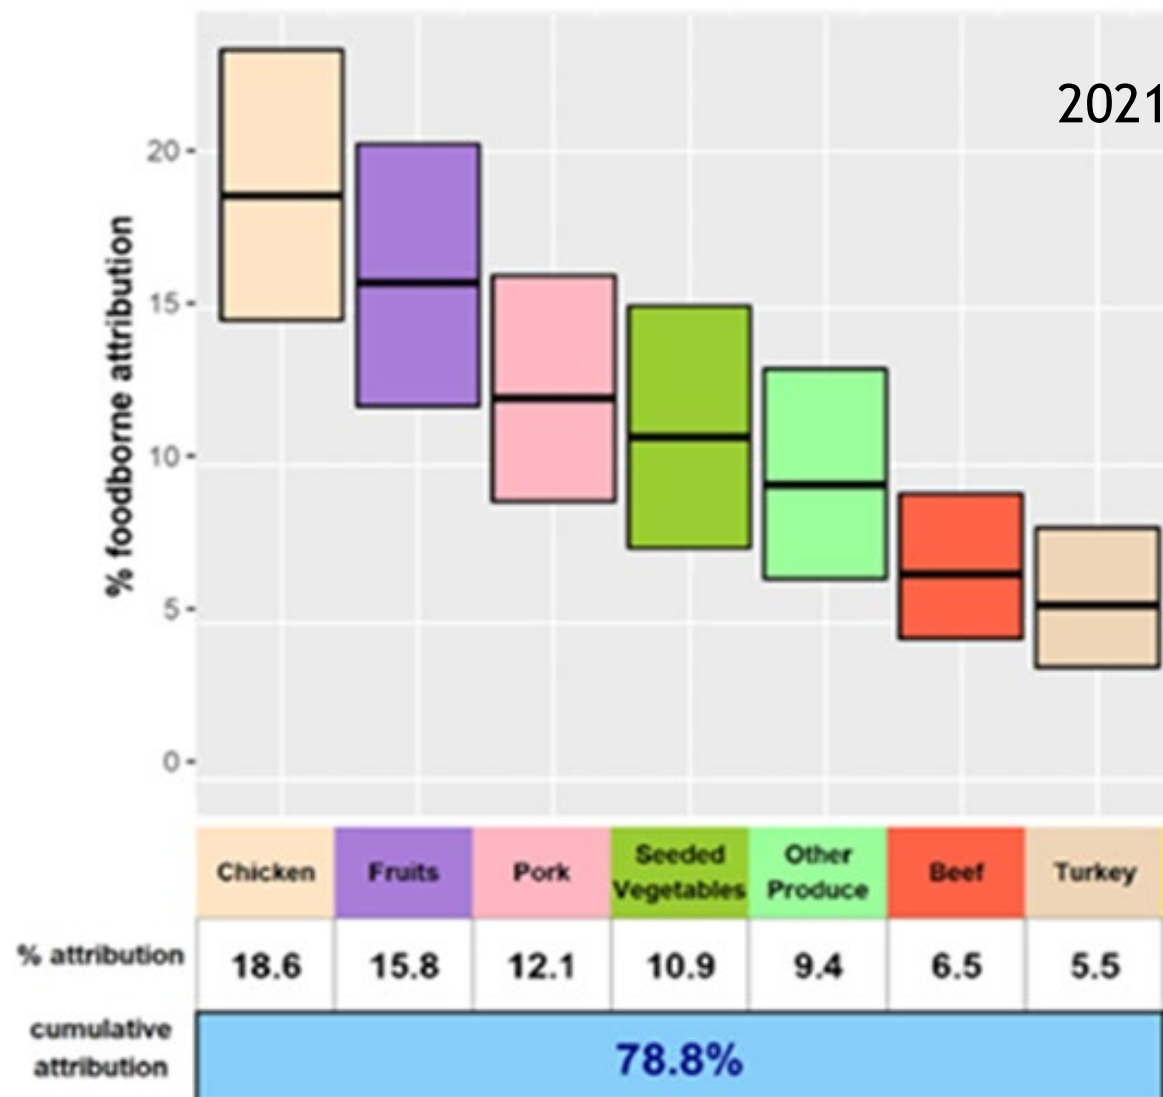

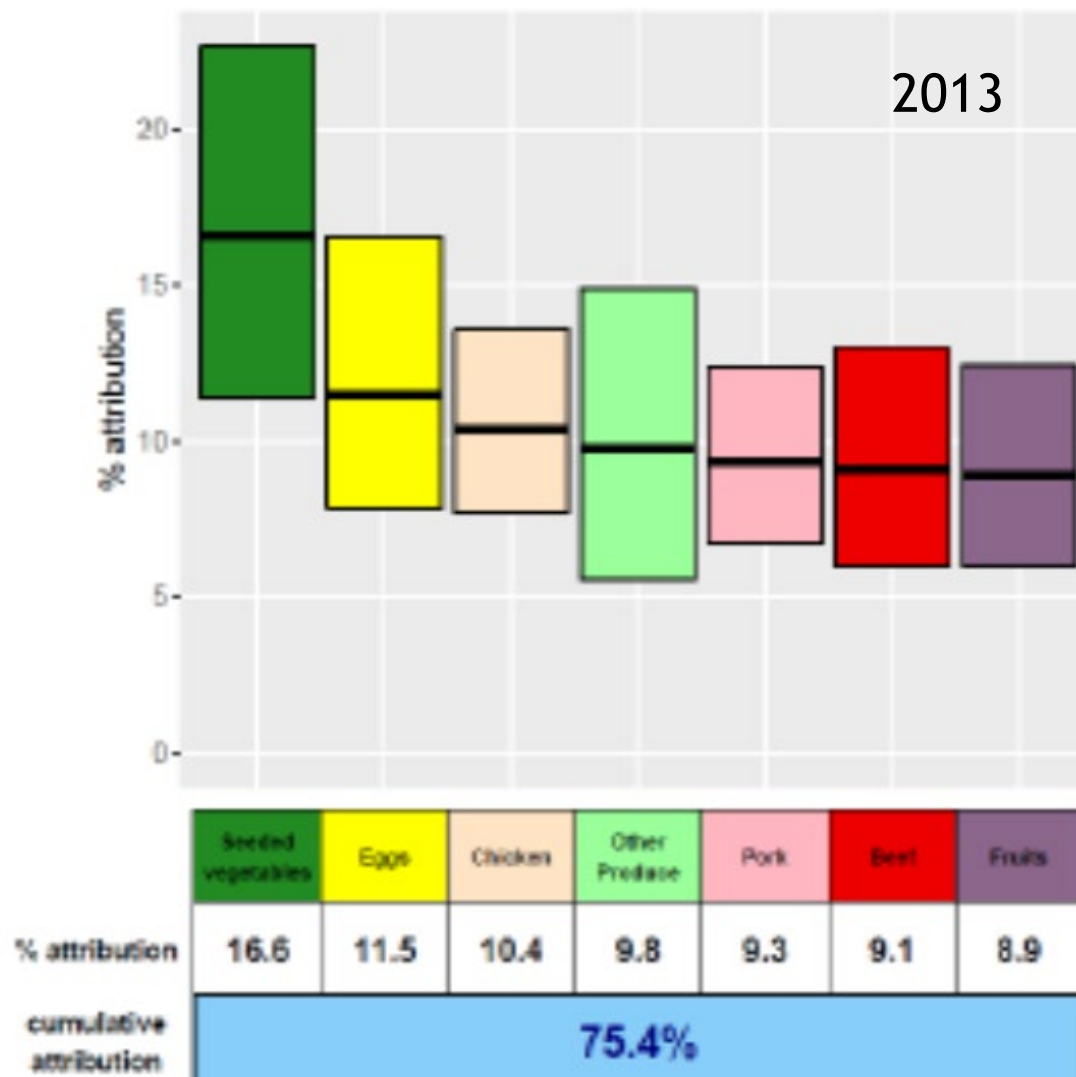

Salmonella serovar prevalence from reported human clinical cases and surveillance of different animal food sources.

Salmonella Attribution to Food Categories, 2021

Salmonella Attribution to Food Categories, 2013, 2021

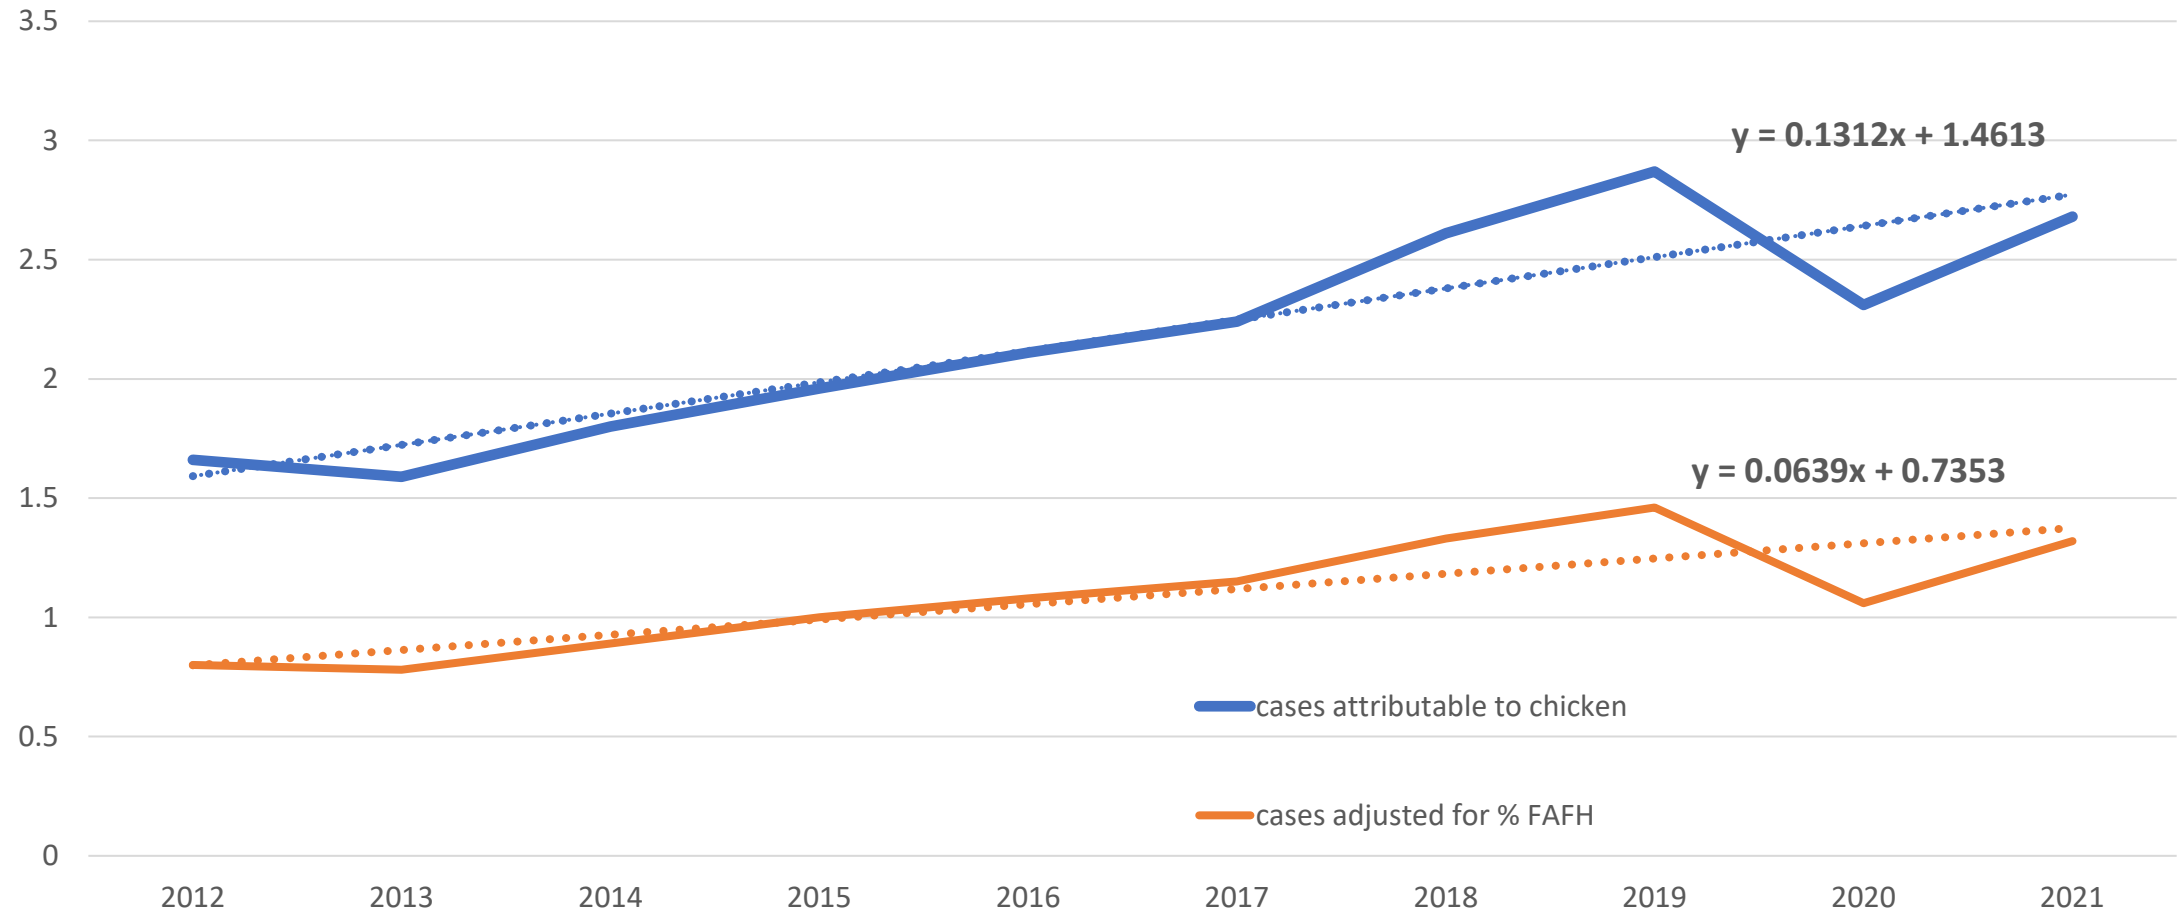

Salmonella infections by year, 2012-2021

Incidence per 100,000 per year, FoodNet data and rates adjusted for IFSAC attribution for chicken.

Salmonella infections by year, 2012-2021

Incidence per 100,000 population, FoodNet data adjusted for IFSAC attribution for chicken, and incidence adjusted for expenditures for food consumed away from home.

THE MEAT AND POULTRY DIALOGUE

- 2011: Stakeholder forum on implementation of the FDA Food Safety Modernization Act (FSMA) Beginning in early 2013.
- 2013: Pew Charitable Trusts (Pew) and Cargill, Inc. (Cargill) discuss feasibility of launching initiative to modernize the United States meat and poultry legislative and regulatory system.
- Positive experience led both to believe most effective approach to kick-starting meat and poultry modernization would be multi-stakeholder dialogue process.

THE MEAT AND POULTRY DIALOGUE

- Recommendations could provide foundation for legislation and changes in applicable regulations and policies developed by U.S. Department of Agriculture's Food Safety and Inspection Service (USDA-FSIS) and relevant policies at state and local level.
- Steering Group members from Pew, Cargill, meat and poultry industry, retail food sector, consumer advocacy community, and academia.
- Key informant interviews: Oct. 2014- Feb. 2015
- Meat and poultry dialogue: Apr. 2015- Dec. 2016
- 2017: Group consensus on recommendations as integrated whole.
 - Individual members differ on particular recommendations.

Recommendations to Modernize the Meat and Poultry Oversight System in the United States

Developed by the Meat and
Poultry Dialogue Group

- Risk-based Oversight System
- Data
- Pre-harvest (Farms and Feedlots)
- Harvest (Slaughter)
- Processing and Further Processing
- Enforcement Authority
- Post-Plant-of-Origin Supply Chain
- Risk Communication
- Health Care and Public Health

Reduce infections caused by Salmonella – FS-04

Status: Improving 

[Learn more about our data release schedule](#)

Most Recent Data:

13.3 laboratory-diagnosed, domestically-acquired *Salmonella* infections per 100,000 population (2021)

Target:

11.5 per 100,000 ¹

Desired Direction:

Decrease desired

Baseline:

15.3 laboratory-diagnosed, domestically-acquired *Salmonella* infections per 100,000 population occurred on average annually in 2016-18 ²

**Goal: “Reduce infections caused by Salmonella”
and fulfill FS-04.**

Objectives

Integrated *Salmonella* surveillance system; data reporting and analysis/evaluation

Use of postharvest intervention technologies

Develop modernized, uniform final product standards

Develop & execute an industry vaccine survey

Utilize a multi-hurdle approach

Comprehensive Risk Assessment

Salmonella Workgroup

Proposed Regulatory Framework to Reduce Salmonella Illnesses Attributable to Poultry

Component 1

Requiring incoming flocks
be tested for Salmonella
before entering an
establishment

Component 2

Enhancing establishment
process control monitoring
and FSIS verification

Component 3

Implementing an
enforceable final product
standard

Members of Coalition for Poultry Safety Reform

Representatives of:

- Consumer groups
- Industry
- Academia
- Former regulators

Coalition for Poultry Safety Reform

Common Goals for Poultry Safety Reform

- **01** - Current performance standards-based system is not leading to the desired public health outcomes.
- **02** - Reform efforts should aim to develop new standards that are objective, risk-based, achievable, enforceable, and flexible enough to adapt to emerging evidence and the latest science.
- **03** - A modernized framework should address risk reduction across the full production process.
- **04** - USDA must address both *Salmonella* and *Campylobacter* in poultry, but these pathogens are different and require different solutions.
- **05** - Science has advanced sufficiently to support regulatory improvements today, but ongoing research is also needed.

Recommendations to Modernize the Meat and Poultry Oversight System in the United States

Developed by the Meat and Poultry Dialogue Group

- Industry sectors across production chain
- Consumer advocacy organizations
- Academics/scientists
- Public-health groups
- Trade associations

- Federal, state and local agencies
- Associations
- Private industry
- Academia
- Nonprofit and advocacy groups

Risk Assessment Models

Top-down models:

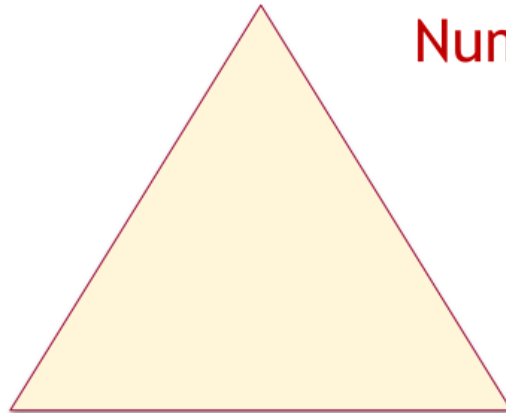

Number of human illnesses

Attribution estimates

% human illnesses due to commodity

Bottom-up models:

Number human illnesses due to commodity

Preparation and consumption scenarios

Prevalence of *Salmonella* in commodity

Salmonella Enteritidis Outbreaks Associated with Chicken Reported to FDOSS, 2015-2021

Category	Confirmed Cases (median)
Multistate outbreaks	28
Single State outbreaks	8

Salmonella Enteritidis Associated with Frozen Raw Breaded Chicken Products, Epidemic Curve and Event Timeline, 2021

* Product manufactured 12/5/2020; 3-5 alleles different cgMLST, 5-9 SNP

Major food groups identified via HG interview form types

SUPPLEMENTAL POULTRY QUESTIONNAIRE FOR *SALMONELLA* ENTERITIDIS CLUSTER 2306MLJEG-3

SECTION 7: POULTRY: Now I have a few questions about chicken and other poultry that you (your child) might have eaten in the 7 days before your (your child's) illness began. This does not include canned items, but the poultry could have been fresh, frozen, or could have been eaten as part of dish. You (your child) could have eaten these either in your home or outside the home. As I read each food, please answer as yes, no, may have eaten, or can't remember eating the food in the 7 days before you (your child) got sick.

First, I have questions about CHICKEN & OTHER POULTRY products.

Yes	Maybe	No	Don't Know	Did you (your child) eat any:
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1. Whole chicken, including rotisserie/roasted chicken?

Yes	Maybe	No	Don't Know	Did you (your child) eat any:
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	2. Pre-cut chicken parts or pieces, such as just breasts, drumsticks, thighs, wings?

If eaten at home:

i) How was the chicken purchased?

Raw, fresh Raw, frozen Already cooked Unknown

ii) What kind of chicken parts/pieces was purchased?:

Chicken breasts Thighs Wings Drumsticks Other: _____

iii) Were the parts/pieces boneless or bone-in? Boneless Bone-in Unknown

iv) Which of the following brands was it?:

vi) Place purchased from (names, locations): _____

vii) Purchase date: ____/____/____ Unknown

viii) If known, what was the "Best If Used By/Expiration" date on that package:

Best if used by date: ____/____/____

USDA Establishment # P _____ (the establishment # starts with "P")

Salmonella Workgroup
